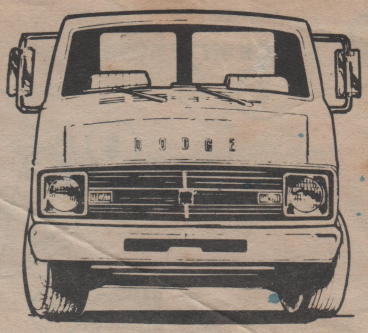
DODGE VAN



IMPORTANT! Read this first before assembly.

You may build this kit more than one way. Before you begin building, look over the instructions carefully. Following the procedure given, test-fit parts together without cementing, after you have decided what version to build. This way you will be more familiar with the location of parts when it becomes time to use cement.

For removing small parts from the "runners" it is best to use a modeler's knife, do not attempt to "twist" them off.

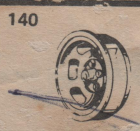
The highest quality styrene plastic goes into the making of each MPC model. Only paint and cement made for styrene should be used. Before joining parts, trim off excess plastic or "flash". Scrape plating from chromed parts where they are to be joined with other parts. Be careful not to get cement on exposed areas. To join parts, use cement sparingly. Apply cement to very small parts with a toothpick.

When painting your model it is best to cement all non-chromed accessories to the body and paint the whole unit at one time.

You should have no trouble assembling your kit if the instructions are followed [illegible].

ASSEMBLY GUIDE

Part numbers as engraved on runner or parts.



Step by step assembly order.

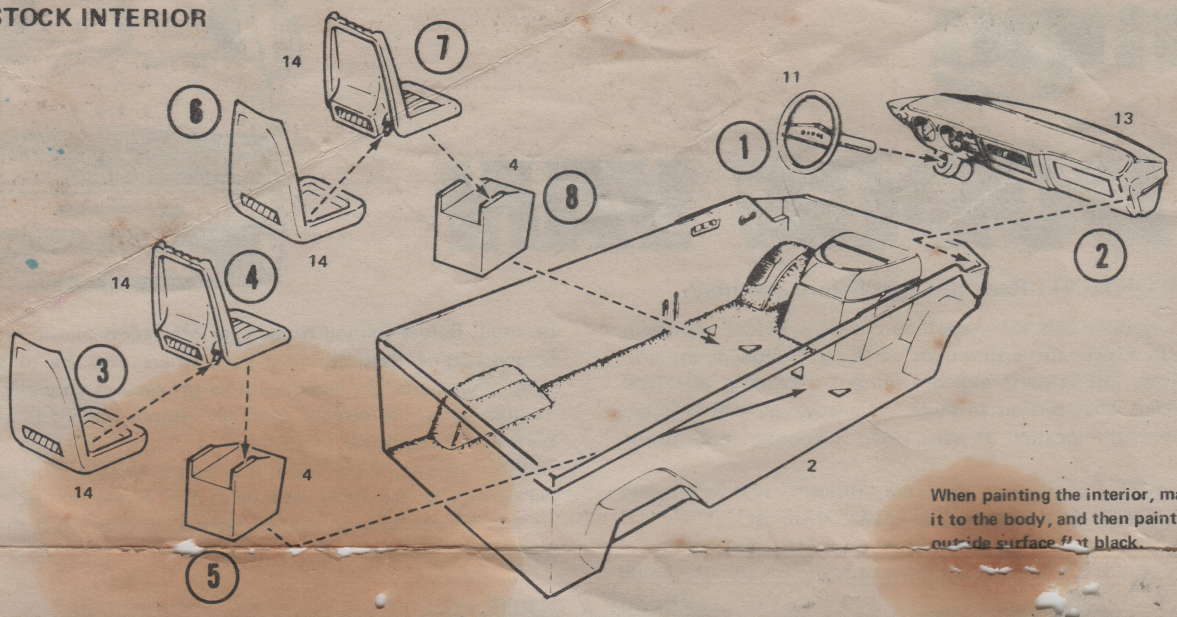
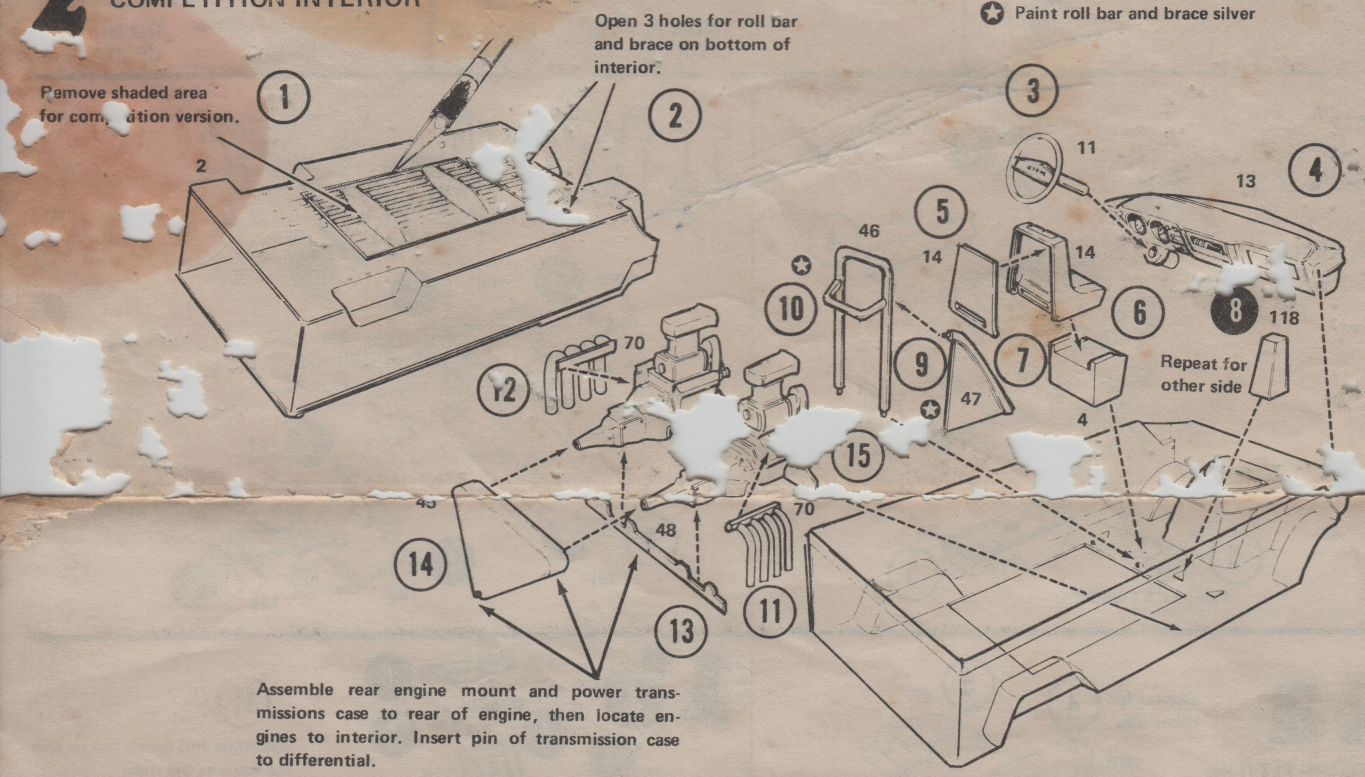
2 STOCK INTERIOR



When painting the interior, match it to the body, and then paint the outside surface flat black.

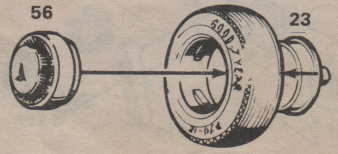
2 COMPETITION INTERIOR



Assemble rear engine mount and power transmissions case to rear of engine, then locate engines to interior. Insert pin of transmission case to differential.

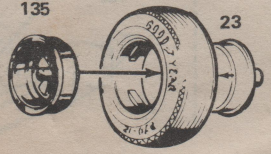
3 STOCK WHEELS

Repeat assembly for other three wheels.



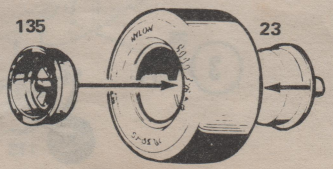
3a COMPETITION WHEELS

Repeat assembly for other front wheel.



3b COMPETITION WHEELS

Repeat assembly for other rear wheel.



4 STOCK CHASSIS
